

# Please Don't Feed Us

Bread does not contain all the nutrients we need to be healthy. Eating it causes deficiencies and leaves us prone to disease and even death.

Bread pollutes the water causing algal blooms that make us sick. Rotting bread on the bottom of ponds causes levels of bacteria to rise contributing to a fatal disease called botulism.

If you feed me every day I won't teach my young how to find food naturally - if you leave we might starve.

**Hello**  
Did you know you shouldn't feed us bread and other human foods?

So...Please don't feed us. We want to stay healthy and keep our home clean.
